Experiment 3

Student Name: Rahul
Branch: BE CSE
Semester: 5
Subject Name: ADBMS

UID: 23BCS10050
Section/Group: KRG-3-A
Date of Performance: 14-08-25
Subject Code: 23CSP-333

1. Aim:

1. Generate an employee relation with only one attribute i.e., EMP_ID. Then, find the max EMP_ID, but excluding the duplicates.

2. Create two tables, Department(ID, name) and Employees(ID, name, salary, deptID). Then output the highest earners from each department.

3. Create two tables A and B with the attributes (EmpID, EmpName, Salary) and output the lowest salary of each employee across the two tables.

2. Requirements (Hardware/Software):

Microsoft SQL server

3. Procedure:

Q.1. Code:
```
CREATE TABLE TBL_EMPLOYEE(
    EMP_ID INT
);
INSERT INTO TBL_EMPLOYEE VALUES (2),(4),(4),(6),(6),(7),(8),(8);

SELECT MAX(EMP_ID) as [Greatest Unique ID] FROM TBL_EMPLOYEE WHERE
EMP_ID IN
(SELECT EMP_ID FROM TBL_EMPLOYEE GROUP BY EMP_ID HAVING
COUNT(EMP_ID)=1);
```

Q.2. Code:

```sql
CREATE TABLE department (
    id INT PRIMARY KEY,
    dept_name VARCHAR(50)
);

-- Create Employee Table
CREATE TABLE employee (
    id INT,
    name VARCHAR(50),
    salary INT,
    department_id INT,
    FOREIGN KEY (department_id) REFERENCES department(id)
);

-- Insert into Department Table
INSERT INTO department (id, dept_name) VALUES
(1, 'IT'),
(2, 'SALES');

-- Insert into Employee Table
INSERT INTO employee (id, name, salary, department_id) VALUES
(1, 'JOE', 70000, 1),
(2, 'JIM', 90000, 1),
(3, 'HENRY', 80000, 2),
(4, 'SAM', 60000, 2),
(5, 'MAX', 90000, 1);

select d.dept_name, e.name, e.salary, d.id
from
employee as e
inner join
department as D
on e.department_id=d.id
where e.salary in (Select max(salary) from employee group by department_id);
```

Q.3. Code:

```sql
create table tbl_A (
 empid int PRIMARY key,
 empname varchar(20),
 salary int
)
```

insert into tbl_A values (1,'AA',1000), (2, 'BB',300);
create table tbl_B (
  empid int PRIMARY key,
  empname varchar(20),
  salary int
)
insert into tbl_B values (2, 'BB',400), (3,'CC',100);

select empid, min(empname) as empname, min(salary) as min_salary from
(select * FROM
tbl_A
UNION
select * from
tbl_b) as UNI
group by empid;

4. Output:

Q.1.

	Greatest Unique ID
1	7

Q.2.

	dept_name	name	salary
1	IT	JIM	90000
2	IT	MAX	90000
3	SALES	HENRY	80000

Q.3

Results | Messages

	empid	empname	min_salary
1	1	AA	1000
2	2	BB	300
3	3	CC	100

5. Learning Outcome:

- **Understand the role of sub-queries in simplifying complex SQL operations.**

- **Apply sub-queries in SELECT, WHERE, and FROM clauses to retrieve specific data.**

- **Utilize sub-queries for filtering, aggregation, and conditional logic.**

- **Analyze query performance implications when using sub-queries versus joins.**
